

# HIGH THREAT HOUSTON BARRICADE

Closeup of corner piece

The Houston Barricade is a decorative yet functional choice for protecting your valuable infrastructure.

The Houston Ultra High Threat Barricade is 8 feet tall by 7 feet long. The gray and tan granite colors make a great blend with other structures while still providing the maximum blast protection using sand for mitigation. Desert Tan and Olive Drab are also available if desired.

No heavy equipment is necessary to install the barricade and it can be repositioned when threat changes occur. This product is ideal for Airports, Federal Applications and any place where there are blast mitigation concerns. This barricade, as well as all the other high density polyethylene products from CBP, is known for catching shrapnel and eliminating rebound and ricochet.

The corner piece for the Houston Barricade is manufactured of the highest quality Polyethylene and is heat and fade resistant. If the material becomes damaged it can be repaired by using any plastic repair kit. The corner piece is made to fit onto the end of the High Threat Houston Barricade and will allow the Houston Barricade to be positioned at 90 degree angles with no gaps or spaces in your security perimeter.
