

HIGH THREAT HOUSTON BARRICADE

Houston Corner allows continuous connection at 90 degree angles.

The Houston Barricade is a decorative yet functional choice for protecting your valuable infrastructure.

The Houston Ultra High Threat Barricade is 8 feet tall by 7 feet long. The gray and tan granite colors make a great blend with other structures while still providing the maximum blast protection using sand for blast mitigation. Desert Tan and Olive Drab are also available if desired.

This product is ideal for Airports, Federal Applications and any place where there are blast mitigation concerns. No heavy equipment is necessary to install the barricade. A funnel is available that fits on top of Houston Barricades and simplifies filling of the barricade using a small loader. Once it is filled with sand, if needed, it can be repositioned with 12k fork lifts or other heavy material handling equipment.

The Houston Corner Barricade is made to fit onto the end of the High Threat Houston Barricade and will allow the Houston Barricade to be positioned at 90 degree angles with no gaps or spaces in your security perimeter.

The Houston Barricade and Corner Barricade are rotationally molded utilizing high density Polyethylene with a UV stabilizer. If the material becomes damaged it can be repaired by using any plastic repair kit. Our sand filled barriers are known for catching shrapnel and eliminating rebound and ricochet.

Description:	Size:	Part Number:	Color:	Empty Weight:	Sand filled Weight:
Houston Barricade	7' long x 4' wide x 8' tall	967HT-DT	Desert Tan	450 lbs.	12,500 lbs.
