

STEEL TIRE SHREDDER

The Tire Shredder and Directional Controller is easily installed to an existing roadway with no excavating or asphalt cutting. The low profile allows for smooth passage in the allowed position. Teeth are spring loaded and retract as vehicle drives over it. The teeth can be locked down to allow travel over it in both directions.

Manufactured in 1/4" thick hot rolled steel for lasting durability, the all welded construction is fabricated in 3 ft. sections to customize your traffic width.
