

PORTABLE GROUND BUNKER

The Portable Ground Bunker is manufactured with four separate wall units that allow for quick and easy assembly. Once in position, the walls are filled from the top using sand as a ballast. The sand filled walls provide the guards inside with 360° of protection from 9mm, 5.56 and 7.62 round threats. 12" dumps are provided for easy removal of the ballast. This allows the Portable Ground Bunker to be easily repositioned as needed.

The overhead cover is constructed of 3/4" plywood on which lights, sensors and antennas can be installed if desired. Access to the top cover can be reached through a hatch door that is pre-installed for convenience. The Portable Ground Bunker eliminates the time and the mess associated with using sandbags. This product was designed to be a recoverable asset that can be broken down and stored on a skid.

Ground Bunker - Sand Filled

Part No.	Item	Size	Total Weight	Empty Weight
4130OD	Olive Drab	8' H x 8' W x 7' L	10,000 lbs.	1,500 lbs.
