

WEAPON CLEARING STATION

The Weapon Clearing Station (WCS) is designed to provide a safe way to make sure a weapon is properly cleared. The polyethylene construction insures the it won't rust or corrode like metal barrels and the UV inhibitor prevents fading. The station is vented to keep the sand dry.

- Service life is 15+ years.
- For weapons using 7.62 rounds and smaller.
- No sandbagging required.
- Attractive appearance. No more ugly, rusty steel drums or wood frames.
- Lip guard prevents damage to weapon.
- Fork pockets make it easy to relocate unit.
- Polyethylene construction will not rust or mark the weapon.

WEAPON CLEARING STATION

DON'T "THINK SAFETY" KNOW YOU ARE SAFE!

No longer will makeshift areas like this be necessary. The Weapon Clearing Station provides a safe, easy to use, and attractive appearance for weapon clearing.

The 360° innovative design allows assurance that you are protected from any angle.

The Weapon Clearing Station can easily be filled with sand through the top fill cap and provides a minimum of 15 inches of mitigation material all the way around the 3" x 4" muzzle insert.

The rear dump makes it easy to empty for ease of relocating the unit. Forklift pockets on the bottom make it easy to relocate.

The lip of the muzzle insert is raised to protect weapons against damage and minimize water entry.

Ease of use allows safe discharge of most rounds without damage to weapon.
