

POLY DRAGON TOOTH CONCRETE FILLED

The Poly Dragon Tooth can be produced in any basic color. Therefore we can produce them to match your specific color. This is ideal if you are trying to match your unit or schools colors. We can produce them with decals as required.

Once produced, we can fill them with concrete and ship them complete and ready to use or we can ship them empty and you fill them with concrete.

The concrete filled Dragon Tooth Barricade is as a restrictive movement traffic control device. It is formidable, efficient and versatile. Once the need has been eliminated the Poly Dragon Tooth can easily be re-positioned elsewhere or stored for later use.

The Poly Dragon Tooth Barricade when arranged in a serpentine pattern as shown can provide you a way to control vehicular traffic at events. If required the Dragon Tooth Barricades can be tied together with an optional steel chain or cable by using the heavy-duty eyes. The Barricades can be easily moved into position and then removed when needed.
