

Portable Safety Barricades

These barricades are easily moved by hand, without engineering support, to provide excellent protection in any application. Simply position the barricades and fill with water or sand for ballast, as determined by the threat level. Empty and recover for repositioning. The barricades are made of rotationally molded plastic and are therefore maintenance free, with no need of paint and no metal to rust. When positioned with ballast these barricades provide protection and security for flight lines, gate approach, roads, bridges, crowd control and many others.

These products are being purchased in depth by all branches of the military, various guard units, border patrols, U.S. embassies, airports and in civilian applications, both in the U.S. and overseas. There have been Live Fire tests conducted by various military units with ballistic protection of multi-hits up to 9mm with water, and 5.56mm and 7.62mm with sand, blast mitigation of 2 Lbs. of C4 from 4 feet, hand grenade from 2 feet, 7 rounds of 40mm flechette canister at 50 meters and a .50 Cal Dearmer with wedge slug fired at 2 feet, with no through penetration, no rebound or ricochet.

These barricades are proven to be quick and effective, safety and anti-terrorism tools. These units are currently in production and can be shipped within thirty days of placing an order. Common colors are Safety Yellow and Olive Drab but are available in most any solid color.

- Full Assembled and ready to use
- Can be filled with water or sand
- Ballistic protection up to 7.62mm when filled with sand
- Easily transportable
- Available in variety of colors
- Available on GSA
