

VEHICLE INSPECTION STATION (VIP)

Creative Building Products is constantly striving to design products that will make the work environment a safer and more efficient place. We recognized the need to streamline and improve vehicle inspections and as a result we have designed the Vehicle Inspection Platform (VIP). Currently, at most gate entrances; guards are required to visually inspect truck beds and trailers before allowing entry. Also, the VIP can be used at border crossings or for rail car inspections.

The simple solution is to place the VIP at all gate entrances and containment areas. The problems mentioned above will be eliminated and you will have a safe, efficient and more logical way to inspect incoming vehicles.

The features are:

- Creates an observation inspection point with your eyes at about 11 ft on standard unit
- Customizable for your specific Length, Width, Roof, etc.
- No tools necessary for assembly or disassembly
- Easy leveling with use of included screw jacks
- Is palletized for shipping and can be deployed on a 463L
- Can be moved or redeployed as necessary
- Stable platform and work surface
- Simple to erect by hand with only one or two personnel - no engineering support required
- Can have lights and signs attached
- Modular for any length required
- Can be easily extended if requirement changes
- Made in the USA
